

**AMENDMENTS TO THE CLAIMS**

1. (currently amended) A print material having a support, at least one red-sensitive silver halide emulsion layer containing at least one cyan coupler, at least one green-sensitive silver halide emulsion layer containing at least one magenta coupler and at least one blue-sensitive silver halide emulsion layer containing at least one yellow coupler, characterized in that the red-sensitive layer contains at least one oil former, the cyan coupler is of the formula

in which

$R^1$  means a hydrogen atom or an alkyl group,

$R^2$  means an alkyl, aryl or hetaryl group,

$R^3$  means an alkyl or aryl group,

$R^4$  means an alkyl, alkenyl, alkoxy, aryloxy, acyloxy, acylamino, sulfonyloxy, sulfamoylamino, sulfonamido, ureido, hydroxycarbonyl, hydroxycarbonylamino, carbamoyl, alkylthio, arylthio, alkylamino or arylamino group or a hydrogen atom and

Z means a hydrogen atom or a group eliminable under the conditions of chromogenic development,

and the ratio by weight of oil former to cyan coupler is less than 1:1 than 0.8:1.

2. (original) A print material according to claim 1, characterized in that it is a colour negative material.

12. (previously presented) The print material according to claim 1, wherein the cyan coupler is of the formula

in which

$R^5$  means a hydrogen atom or an alkyl group,

$R^6$  means  $OR^7$  or  $NR^8R^9$ ,

$R^7$  means an unsubstituted or substituted alkyl group with 1 to 6 atoms,

$R^8$  means an unsubstituted or substituted alkyl group with 1 to 6 atoms,

$R^9$  means a hydrogen atom or an unsubstituted or substituted alkyl group with 1 to 6 C atoms,

$R^{10}$  means an unsubstituted or substituted alkyl group and

Z means a hydrogen atom or a group eliminable under the conditions of chromogenic development,

wherein the total number of the C atoms of the alkyl groups  $R^7$  and  $R^{10}$  in a coupler molecule is 8 to 18.

13. (previously presented) The print material according to claim 1, wherein the oil former comprises a high-boiling organic solvent and/or a polymer.

14. (previously presented) The print material according to claim 1, wherein the ratio by weight of oil former : cyan coupler is at least 0.05:1.
15. (previously presented) The print material according to claim 1, wherein the oil former is a high-boiling organic solvent.
16. (previously presented) The print material according to claim 14, wherein the polymer comprises homo- or copolymer, which is insoluble in water and soluble in organic solvents.
17. (previously presented) The print material according to claim 1, wherein the silver halide crystals of the red-sensitive layer have a chloride content of at least 95 mol%.
18. (previously presented) A process for the production of a positive reflection print from a color negative, which comprises exposing an image information onto the print material as claimed in claim 1.
19. (previously presented) The process according to claim 18, wherein the color negative is digitized and exposure is performed with a scanning printer.
20. (previously presented) The process according to claim 18, wherein the exposing is performed with an analogue printer.
